

RF Emissions Compliance Summary
Site Address: 703-709 Chicopee Row, Groton, MA 01450
T-Mobile Site ID: 4BS0477A

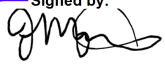

To Whom It May Concern:

The proposed T-Mobile wireless facility located at 703-709 Chicopee Row, Groton, Massachusetts has undergone a comprehensive Radio Frequency Exposure Analysis completed by Centerline Communications LLC, an independent telecommunications engineering and consulting firm.

The study evaluated the proposed facility for compliance with the Federal Communications Commission Radio Frequency Electromagnetic Energy (EME) exposure requirements established under 47 CFR § 1.1307(b) and 47 CFR § 1.1310, utilizing the methodologies described in FCC Office of Engineering and Technology (OET) Bulletin 65, Edition 97-01. The analysis concluded that the proposed facility is fully compliant with the FCC's Maximum Permissible Exposure (MPE) limits for the general public. The maximum cumulative RF exposure calculated at ground level is 3.14385% of the FCC General Population MPE limit, while the maximum cumulative exposure at the adjacent 25-foot rooftop is 1.941% of the allowable limit. Both values are substantially below the federal limit of 100%.

Based on these results, Centerline concluded that all theoretical RF exposure levels associated with the proposed equipment are within the allowable federal limits for public exposure and that the facility complies with all applicable FCC rules and regulations governing RF emissions.

Thank you,
