EROSION CONTROL NOTES:

1. MANAGEMENT STRATEGIES:
   - Erosion control strategies shall include the use of temporary sediment basins, silt fences, and grass seed or sod on disturbed areas.
   - Temporary erosion control measures shall be installed immediately following disturbance of soil.

2. MAINTENANCE/PERFORMANCE STANDARDS:
   - Erosion control measures shall be maintained in good condition throughout the construction period.
   - Monitoring of erosion control measures shall be conducted at least once per week.

3. REQUIREMENTS:
   - All construction areas shall be fenced with temporary fencing material to prevent access by unauthorized personnel.
   - Erosion control measures shall be installed in accordance with the approved plans and specifications.

4. CONSTRUCTION SEQUENCE:
   - Erosion control measures shall be installed sequentially to minimize exposure time.
   - Erosion control measures shall be installed prior to the commencement of excavation.

5. RIVER FRONT CALCULATIONS:
   - River front calculations shall be performed to determine the required width and height of siltation barriers.
   - Siltation barriers shall be installed at the base of the river front to prevent erosion.

6. SILTATION BARRIER:
   - Siltation barriers shall be placed at the base of the river front to prevent erosion.
   - Siltation barriers shall be constructed of durable material to withstand the forces of water.

7. CATCH BASIN SEDIMENT TRAP:
   - Catch basin sediment traps shall be installed at all vehicular access points.
   - Catch basin sediment traps shall be designed to collect and retain sediment.

8. TEMP. CONSTRUCTION ENTRANCE DETAIL:
   - Temporary construction entrances shall be designed to minimize soil disturbance.
   - Temporary construction entrances shall be constructed of durable material to withstand the forces of water.
